

Ministry of Utility and Telecommunication (MUT) Approved Competency Program

GFC 2011 GAS FITTER CLASS II

This course provides both theoretical and practical knowledge related to fuel gas industry and piping system in Malaysia. Participants will also learn on fuel gas storage system, gas meter and regulator selection, as well as fuel gas piping maintenance and servicing. Knowledge on combustion process, gas burner system, fuel gas pipe welding and project management will also be thought in this course. Within the course, site visit to gas piping installation at laundry/kitchen will be conducted. Major components of the course will focus on the design activities, utilizing MS930 design methods and Microsoft Visio software, related to Class III gas installation classification.

CONTENTS

- Fuel Gas Industry II
- Fuel Gas Storage System I Gas Meter and Regulation Selection
- Fuel Gas Piping Maintenance and Servicing II Combustion Process and Gas Burner System
- Fuel Gas Welding I
- Project Management I
- MS930 Design Methods
- Include: Theoretical, Practical & Design Assessment Etc.
